

TO WHOM IT MAY CONCERN,

**Re: CJK Engineering; Mater Private Hospital CCDC, Cherrywood.**

CJK Engineering carried out the installation works at the MPH Community Care Diagnostic Centre (CCDC) in Cherrywood, where CSD Engineering acted as the Mechanical and Electrical Consulting Engineers.

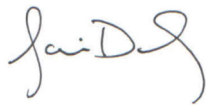

This project involved a small strip-out, temporary power installation and a full electrical installation with MIC increase. This involved back-up generators being required to keep essential lab experiments live as there were two existing tenants over four floors in the building.

The CJK management team were professional, cooperative and highly pro-active in both pre-construction and construction phases and resourced the project sufficiently to meet the extremely challenging programme.

We are pleased to advise that the project was delivered to a high quality and fully demonstrated to us in advance of handover to our client. This was a turn-key solution project in which CJK delivered a finished product to a remarkably good standard. Since project completion, no major issues have arisen and we understand the client was entirely satisfied with the works.

We would have no hesitation in recommending CJK Engineering for future works and look forward to working with them in the future

Yours faithfully,
