

August 2020

To whom it concerns,

CJK Engineering was employed by Collen Construction as the Electrical Contractor on the Scots Church Project on Lower Abbey Street Dublin, for our client VHI Healthcare.

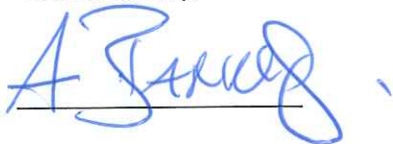

This multifaceted project, which was completed from 2016-19, included the expansion & fit-out of the existing VHI Healthcare offices, the construction of a new 7 storey contemporary office space and adaptive re-use of a 150-year-old Presbyterian Church 'Scots Church'.

Scots Church was a protected structure and the primary challenge for the team was to respect and preserve all the significant historical and architectural heritage of the church, whilst meeting the client's specific requirements. CJK helped create a building that provided innovative office space, communal break out/meeting areas, innovation hub space and a contemporary energetic workspace for the VHI staff.

Collen and our client are more than satisfied with the services provided by the CJK team, the level of professionalism and attention to detail given throughout the build. Since completion Scots Church has gone on to be an award-winning building and CJK played their part in achieving that.

We have found CJK Engineering to be professional, co-operative, and always willing to find solutions to challenges that occur from day to day. I would have no hesitation in recommending them future projects, however complex.

Yours faithfully,

Alan Barnes
Senior Project Manager
Collen Construction
