

To whom it might concern,  
13.8.2020

It is my pleasure to recommend the services of CJK as electrical contractors and engineers. I have been using their services for the the last 5 years we have completed many projects successfully with them.

We confirm that CJK Electrical were responsible for and have completed the electrical installation works on the new Headquarters building at VHI Abbey Street. This was both a new building and an extensive refurbishment of the office accommodation. The project posed particular challenges in relation to co-ordination of heavily densified mechanical and electrical services and the refurb of existing while occupied. These included limitations with the existing structure, repurposing existing core services and specialist spaces. The quality of installation had to maintain a high quality finish, to emphasise all the exposed services to help compliment the architectural interior intent.

SEHA found CJK Electrical to be very pro-active and accommodating to all of our engineering team (from Director to junior level), especially when dealing with construction difficulties and project design changes.

Their construction team was extremely well structured with good communication across their sub-contractors. They were always contactable with timely and concise responses. Their team had a great culture with positive attitudes and were always professional.

If you require further information or would like to speak directly with me about any of the project specifics, please do not hesitate to contact me at the number listed below.

Kind Regards  
Simon Killeen
